^a*Specify current severity: Mild, Moderate, Severe. This specifier applies only to major neurocognitive disorders (including probable and possible).*

^b*Specify: Without behavioral disturbance, With behavioral disturbance. For all mild neurocognitive disorders, substance/medication-induced major neurocognitive disorder, and unspecified neurocognitive disorder, behavioral disturbance cannot be coded but should still be recorded.*

Note: As indicated for each subtype, an additional medical code is needed for most major neurocognitive disorders, including those due to probable and possible medical etiologies. The medical etiology should be coded first, before the code for the major neurocognitive disorder. An additional medical code should *not* be used for any mild neurocognitive disorder and is not used for major or mild vascular neurocognitive disorder, substance/medication-induced major or mild neurocognitive disorder, and unspecified neurocognitive disorder.

Coding note: *For major and mild neurocognitive disorders:* Use additional code(s) to indicate clinically significant psychiatric symptoms due to the same medical condition causing the major NCD (e.g., F06.2 psychotic disorder due to Alzheimer's disease with delusions; F06.32 depressive disorder due to Parkinson's disease, with major depressive-like episode.) **Note:** The additional codes for mental disorders due to another medical condition are included with disorders with which they share phenomenology (e.g., for depressive disorders due to another medical condition, see "Depressive Disorders").

See also the criteria set and corresponding recording procedures in the manual for more information.
